Turbo Coding, Turbo Equalisation and Space-Time Coding for Transmission over Fading Channels

Lajos L. Hanzo, T. H. Liew, B. L. Yeap

Against the backdrop of the emerging 3G wireless personal communications standards and broadband access network standard proposals, this volume covers a range of coding and transmission aspects for transmission over fading wireless channels. It presents the most important classic channel coding issues and also the exciting advances of the last decade, such as turbo coding, turbo equalisation and space-time coding. It endeavours to be the first book with explicit emphasis on channel coding for transmission over wireless channels. Divided into 4 parts: Part 1 - explains the necessary background for novices. It aims to be both an easy reading text book and a deep research monograph. Part 2 - provides detailed coverage of turbo conventional and turbo block coding considering the known decoding algorithms and their performance over Gaussian as well as narrowband and wideband fading channels. Part 3 - comprehensively discusses both space-time block and space-time trellis coding for the first time in literature. Part 4 - provides an overview of turbo equalisations, also referred to as turbo demodulation. The book systematically converts the lessons of Shannon's information theory into design principles applicable to practical wireless systems. It provides overall design performance studies, giving cognizance to the contradictory design requirements of bit error rate, implementational complexity, coding and interleaving delay, effective throughput, coding rate and other related systems design aspects in a comprehensive manner.

From reader reviews:

Richard McCain:

In this 21st one hundred year, people become competitive in each and every way. By being competitive right now, people have do something to make these survives, being in the middle of the actual crowded place and notice by means of surrounding. One thing that at times many people have underestimated it for a while is reading. Sure, by reading a publication your ability to survive improve then having chance to stand than other is high. For you personally who want to start reading any book, we give you this specific Turbo Coding, Turbo Equalisation and Space-Time Coding for Transmission over Fading Channels book as nice and daily reading reserve. Why, because this book is more than just a book.

Sally Norman:

Are you kind of busy person, only have 10 or 15 minute in your morning to upgrading your mind expertise or thinking skill possibly analytical thinking? Then you are receiving problem with the book than can satisfy your short space of time to read it because pretty much everything time you only find e-book that need more time to be learn. Turbo Coding, Turbo Equalisation and Space-Time Coding for Transmission over Fading Channels can be your answer because it can be read by a person who have those short time problems.

Douglas Ayer:

This Turbo Coding, Turbo Equalisation and Space-Time Coding for Transmission over Fading Channels is new way for you who has interest to look for some information as it relief your hunger of knowledge. Getting deeper you into it getting knowledge more you know or perhaps you who still having tiny amount of digest in reading this Turbo Coding, Turbo Equalisation and Space-Time Coding for Transmission over Fading Channels can be the light food for you personally because the information inside this particular book is easy to get by means of anyone. These books create itself in the form which can be reachable by anyone, yes I mean in the e-book application form. People who think that in book form make them feel drowsy even dizzy this publication is the answer. So you cannot find any in reading a book especially this one. You can find actually looking for. It should be here for you. So , don't miss the idea! Just read this e-book variety for your better life along with knowledge.

Claudia Chittum:

Do you like reading a guide? Confuse to looking for your preferred book? Or your book was rare? Why so many concern for the book? But just about any people feel that they enjoy with regard to reading. Some people likes reading, not only science book and also novel and Turbo Coding, Turbo Equalisation and Space-Time Coding for Transmission over Fading Channels or others sources were given know-how for you. After you know how the great a book, you feel wish to read more and more. Science book was created for teacher as well as students especially. Those books are helping them to put their knowledge. In various other case, beside science guide, any other book likes Turbo Coding, Turbo Equalisation and Space-Time Coding

for Transmission over Fading Channels to make your spare time much more colorful. Many types of book like this one.
