Heinrich Dörrie

100 Great Problems of Elementary Mathematics (Dover Books on Mathematics) Heinrich Dörrie

"The collection, drawn from arithmetic, algebra, pure and algebraic geometry and astronomy, is extraordinarily interesting and attractive." — *Mathematical Gazette*

This uncommonly interesting volume covers 100 of the most famous historical problems of elementary mathematics. Not only does the book bear witness to the extraordinary ingenuity of some of the greatest mathematical minds of history — Archimedes, Isaac Newton, Leonhard Euler, Augustin Cauchy, Pierre Fermat, Carl Friedrich Gauss, Gaspard Monge, Jakob Steiner, and many others — but it provides rare insight and inspiration to any reader, from high school math student to professional mathematician. This is indeed an unusual and uniquely valuable book.

The one hundred problems are presented in six categories: 26 arithmetical problems, 15 planimetric problems, 25 classic problems concerning conic sections and cycloids, 10 stereometric problems, 12 nautical and astronomical problems, and 12 maxima and minima problems. In addition to defining the problems and giving full solutions and proofs, the author recounts their origins and history and discusses personalities associated with them. Often he gives not the original solution, but one or two simpler or more interesting demonstrations. In only two or three instances does the solution assume anything more than a knowledge of theorems of elementary mathematics; hence, this is a book with an extremely wide appeal.

Some of the most celebrated and intriguing items are: Archimedes' "Problema Bovinum," Euler's problem of polygon division, Omar Khayyam's binomial expansion, the Euler number, Newton's exponential series, the sine and cosine series, Mercator's logarithmic series, the Fermat-Euler prime number theorem, the Feuerbach circle, the tangency problem of Apollonius, Archimedes' determination of pi, Pascal's hexagon theorem, Desargues' involution theorem, the five regular solids, the Mercator projection, the Kepler equation, determination of the position of a ship at sea, Lambert's comet problem, and Steiner's ellipse, circle, and sphere problems.

This translation, prepared especially for Dover by David Antin, brings Dörrie's "Triumph der Mathematik" to the English-language audience for the first time.

From reader reviews:

Benjamin Ward:

As people who live in the particular modest era should be change about what going on or details even knowledge to make these keep up with the era and that is always change and progress. Some of you maybe may update themselves by reading through books. It is a good choice for yourself but the problems coming to a person is you don't know what one you should start with. This 100 Great Problems of Elementary Mathematics (Dover Books on Mathematics) is our recommendation so you keep up with the world. Why, since this book serves what you want and want in this era.

Bruce Brown:

Often the book 100 Great Problems of Elementary Mathematics (Dover Books on Mathematics) will bring that you the new experience of reading the book. The author style to describe the idea is very unique. When you try to find new book to study, this book very suited to you. The book 100 Great Problems of Elementary Mathematics (Dover Books on Mathematics) is much recommended to you to learn. You can also get the e-book from the official web site, so you can quickly to read the book.

Gilbert Pellerin:

In this age globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The fitness of the world makes the information simpler to share. You can find a lot of referrals to get information example: internet, paper, book, and soon. You will see that now, a lot of publisher this print many kinds of book. Typically the book that recommended for you is 100 Great Problems of Elementary Mathematics (Dover Books on Mathematics) this guide consist a lot of the information of the condition of this world now. This kind of book was represented how can the world has grown up. The dialect styles that writer use for explain it is easy to understand. Typically the writer made some investigation when he makes this book. That's why this book acceptable all of you.

Robert Poulin:

Is it an individual who having spare time subsequently spend it whole day through watching television programs or just lying down on the bed? Do you need something new? This 100 Great Problems of Elementary Mathematics (Dover Books on Mathematics) can be the answer, oh how comes? A fresh book you know. You are so out of date, spending your spare time by reading in this new era is common not a nerd activity. So what these books have than the others?
